# Problem statement and real world status

*(Six Degrees of Inner Turbulence)*

**IPv6 and IPv4 are incompatible on the wire.**

- We need transition and translation mechanisms between the two protocols
- Mobile operators are massively switching devices to IPv6-only connectivity
  - millions of users
  - using 464XLAT (Android) or plain NAT64 (Apple) as a transition tool to access IPv4 content
- Some people do weird stuff while adding AAAA to their DNS records
- Important questions:
  - Do content providers know how their content will be seen from such environments?
  - Do connectivity providers know what their users' experience on IPv6-only would be?

# Credits, acknowledgments and supporters

*(Metropolis, Pt. 1: The Miracle and the Sleeper)*

**Projects like this and all the massive amount of work cannot be performed without great support of people and companies that we work with:**

[Internet Society](#) - for Jan's working time and funding of the numerous travels where we got the idea of the IPv6 issues while talking to operators and also future travels where we'll talk about this topic (we are here, aren't we? :) )

[Go6 Institute Slovenia](#) - for funding and running the Go6lab where we got connectivity, HW, SW and place to experiment with all this things IPv6

[SJM Steffann](#) for Sander's working time, coding skills, massive energy and also HW/SW in their ipv6-lab.net to make this tool redundant.

[Corinne Pritchard](#) for a lovely design of a tool's front-end. Hugs :)

# Go6lab NAT64/DNS64 public test-bed

*(The Test That Stumped Them All)*

Aimed at everyone who would like to test NAT64/DNS64 functionality

4 different implementations, 4 different instructions how to direct traffic there

Used by operators

Testing the idea of providing NAT64/DNS64 and/or 464XLAT to their users

Used by application providers

To see how their apps works in NAT64/DNS64 environment

Used by HW/SW vendors

Testing their solutions against multiple NAT64 vendors

Gained quite some traction and momentum this days

Instructions: <https://go6lab.si/current-ipv6-tests/nat64dns64-public-test/>

# Go6lab NAT64/DNS64 test-bed

 <https://go6lab.si/current-ipv6-tests/nat64dns64-public-test/>

## NAT64/DNS64 public test

Go6lab is hosting a variety of NAT64/DNS64 solutions, open for general Internet public for testing.

*Disclaimer: This setup is not intended for performance testing, just to see how NAT64/DNS64 operates, what applications breaks and what are differences between different implementations. If you need to do performance testing of NAT64/DNS64 send email to [<zavod@g6lab.si>](mailto:<zavod@g6lab.si>) and schedule a test session in go6lab facility.*

To test different NAT64/DNS64 setups you need to disable IPv4 on your device and set an IPv6 resolving DNS server, different one for each setup. Please **send us** your observations, specially about which applications breaks in IPv6-only/NAT64 environment. We would like to build a list of them.

**A10 Networks** NAT64 implementation: set your DNS to **2001:67c:27e4:15::6411**

NAT64 implementation is running on a A10 vThunder virtual appliance.

NAT64 routed prefix: 2001:67c:27e4:642::/64

Quick ping6 test if up&running: ping6 2001:67c:27e4:642::5bef:6015

**PaloAlto Networks Firewall** NAT64 with BIND9.9 DNS64: set your DNS to **2001:67c:27e4::64**

NAT64 implementation is running in PAN500 firewall box.

NAT64 routed prefix: 2001:67c:27e4:64::/64

Quick ping6 test if up&running: ping6 2001:67c:27e4:64::5bef:6015

**Jool** NAT64 with BIND9 DNS64: set your DNS to **2001:67c:27e4:15::64**

**Jool** NAT64 implementation is running in a virtual container on proxmox server.

NAT64 routed prefix: 2001:67c:27e4:1064::/64

Quick ping6 test if up&running: ping6 2001:67c:27e4:1064::5bef:6015

**Cisco ASR1000** NAT64 with BIND9 DNS64: set your DNS to **2001:67c:27e4::60**

NAT64 implementation is running in Cisco ASR1001.

NAT64 routed prefix: 2001:67c:27e4:11::/64

Quick ping6 test if up&running: ping6 2001:67c:27e4:11::5bef:6015

# Go6lab NAT64/DNS64 test-bed HW/SW

(Systematic Chaos)

# Some DNS admins put “crap” in AAAA records

*(The Enemy Inside)*

Have you ever seen any of this values for AAAA record?

::

::1

::ffff:[IPv4\_addr]

fe80::[some\_value]

64:ff9b::[some\_value]

2001:DB8::[some\_value]

If you have seen something like this and you know who did it, talk to that people and tell them to fix it. This sort of thing isn't useful to anybody and severely impacts user experience.

# When deploying in real life you need “fixes”

*(Build Me Up, Break Me Down)*

So, what can we do about it?

We can figure out who these people are, contact them, warn them about the issue, educate them and ask them to fix the problem.

**Remember: If you are not part of solution, you are part of the problem.**

At the same time we can protect our users from bad user experience and set the “exclude” rules in our DNS64 servers. IANA allocated 2000::/3 as global unicast address pool, so whatever else is used in AAAA - it’s by default bogus and we can safely ignore that.

# When deploying in real life you need “fixes”

*(Stream of Consciousness)*

BIND9 example of DNS64 configuration in go6lab:

```
dns64 2001:67c:27e4:64::/96 {  
    clients { any; };  
    mapped { !rfc1918; any; };  
    exclude { 0::/3; 4000::/2; 8000::/1; 2001:DB8::/32; };  
    break-dnssec yes;  
};
```

Explanation of “exclude” configuration parameter: If DNS64 server gets an AAAA record with a value of anything outside 2000::/3 - it ignores it and synthesizes the AAAA record from NAT64\_prefix::IPv4\_address

# When deploying in real life you need “fixes”

*(Moment Of Betrayal)*

This fixes the most common errors and keeps your users relatively safe from bad user experience when using 464XLAT and NAT64

This also prevent issues when AAAA record contains an IPv6 documentation prefix, that is inside 2000::/3 block.

“Break-dnssec yes” configuration directive:

By default, DNS64 module does not process queries that request DNSSEC data (DO = 1) or that have DNSSEC RRs in the answer. Setting break-dnssec yes will override this default and cause policy processing on all DNSSEC queries. However, the constructed response will not have any DNSSEC records added and therefore cannot be verified by the client (it may have the unintended consequence of looking like a bogus response or even an injection attack to the client).

#
#    private-address: ::/128
    interface: 2001:67c:27e4::64
```

# More reading on DNS64 and DNSSEC – RFC 6147

The screenshot shows the header of the RFC 6147 document. At the top, there are navigation icons (back, forward, search, etc.) and a secure connection indicator. The URL is https://tools.ietf.org/html/rfc6147. Below the header, there is a menu bar with links to [Docs], [txt|pdf], [draft-ietf-behave...], [Diff1], [Diff2], [IPR], and [Errata]. A large button labeled "PROPOSED STANDARD" is present. To its right, a red link "Errata Exist" is visible. Below the button, the document title is "Internet Engineering Task Force (IETF) Request for Comments: 6147 Category: Standards Track ISSN: 2070-1721". To the right of the title, author information is listed: M. Bagnulo (UC3M), A. Sullivan, Shinkuro, P. Matthews, Alcatel-Lucent, I. van Beijnum, and IMDEA Networks. The date "April 2011" is also mentioned.

## DNS64: DNS Extensions for Network Address Translation from IPv6 Clients to IPv4 Servers

### Abstract

DNS64 is a mechanism for synthesizing AAAA records from A records. DNS64 is used with an IPv6/IPv4 translator to enable client-server communication between an IPv6-only client and an IPv4-only server, without requiring any changes to either the IPv6 or the IPv4 node, for the class of applications that work through NATs. This document specifies DNS64, and provides suggestions on how it should be deployed in conjunction with IPv6/IPv4 translators.

# Good DNS, bad server: notificaciones.060.es

The screenshot shows the official Spanish Government website for electronic notifications ('notificaciones.060.es'). At the top, there are links for 'mapa web', 'preguntas frecuentes', 'contactar', 'bienvenidos', 'benvinguts', 'benvídos', 'ongi etorri', and 'benvinguda'. The 'GOVERNO DE ESPAÑA' logo is also present. The main content area features a large heading 'Servicio de Notificaciones Electrónicas' and a sub-section 'Reciba sus Notificaciones de forma segura y gratuita'. Below this, three blue buttons list steps: '1 DESE DE ALTA CON DNI O CERTIFICADO ELECTRÓNICO', '2 SUSCRÍBASE A PROCEDIMIENTOS', and '3 ENTRE AL BUZÓN DE NOTIFICACIONES'. To the right, there are sections for 'Aplicación para Android' (with a Google Play link) and 'Aplicación para iPhone y iPad' (with an App Store link). Further down, there's a section titled 'Verifique la validez de una certificación impresa' with a 'CERES' logo. The bottom of the page includes links for 'Soporte' (Requisitos de acceso, Zona de descarga, Preguntas frecuentes, Contacte con nosotros) and 'Normativa' (Condiciones de Utilización del Servicio, Aviso Legal, Política de Privacidad de Datos). The footer contains the 'GOVERNO DE ESPAÑA' logo and a 'WS-MAT-AA WCAG 1.0' accessibility badge.

This screenshot shows the same website as above, but with a different URL ('notificaciones.060.es'). The error message 'Estamos procediendo a la actualización de nuestros sistemas. Disculpe las molestias.' is displayed prominently. The footer indicates the page was last updated in 2016 by the Ministry of Finance and Public Administrations.

IPv6 and NAT64

# No AAAA, server still confused: uc.cn

The screenshot shows the official website for UC Browser. At the top, there's a navigation bar with links for Home, UC Browser, Download, Media, Business Partners, and Community. Below the navigation is a section titled "Company". The main content features a large, colorful illustration of a cartoon fox character holding a smartphone. The text "Awesome Local Video Experience" and "UC Browser Mini 10.5 for Android" is displayed. There are download buttons for "Download" and "Google Play". Below the download buttons are icons for Android, iPhone, PC Browser, Windows Phone, Java, Pad, and a QR code. A "Product News" section at the bottom left lists recent news items, and an "Activity Area" section on the right lists activities like "Meet Miss UC and Win Prize at UC Forum".

The screenshot shows the Apache2 Ubuntu Default Page. The page title is "Apache2 Ubuntu Default Page" with the Ubuntu logo. It features a "It works!" message. Below it, a paragraph explains the purpose of the page and how to replace the default file. A "Configuration Overview" section provides details about the Apache2 configuration layout. A code block shows the directory structure of configuration files: /etc/apache2/{apache2.conf, ports.conf, mods-enabled, load.conf, conf-enabled, conf-available, sites-enabled, sites-available}. A list of bullet points explains the functions of these files. At the bottom, a "Document Roots" section states that access is restricted to specific files.

```
/etc/apache2/
|-- apache2.conf
|   '-- ports.conf
|-- mods-enabled
|   '-- *.load
|   '-- *.conf
|-- conf-enabled
|   '-- *.conf
|-- conf-available
|   '-- *.available
|-- sites-enabled
|   '-- *.conf
```

- apache2.conf is the main configuration file. It puts the pieces together by including all remaining configuration files when starting up the web server.
- ports.conf is always included from the main configuration file. It is used to determine the listening ports for incoming connections, and this file can be customized anytime.
- Configuration files in the mods-enabled/, conf-enabled/ and sites-enabled/ directories contain particular configuration snippets which manage modules, global configuration fragments, or virtual host configurations, respectively.
- These are activated by symlinking available configuration files from their respective \*.available/ counters. These should be managed by using our helpers `a2enmod`, `a2dismod`, `a2ensite`, `a2dissite`, and `a2enconf`. See their respective man pages for detailed information.
- The binary is called apache2. Due to the use of environment variables, in the default configuration, apache2 needs to be started/stopped with `/etc/init.d/apache2` or `apache2ctl`. Calling `/usr/bin/apache2` directly will not work with the default configuration.

# Good server, bad content: thegatewaypundit.com

The screenshot shows the homepage of thegatewaypundit.com. At the top is a banner with the text "GATEWAY PUNDIT" and "Where Hope Finally Made A Comeback". Below the banner is a navigation bar with links: Home, About, Archives, Advertise, Facebook, Twitter, and YouTube. The main content area features several news articles. One article, "Michelle Obama Says She's Never Heard Anything Like Trump - Rush Limbaugh Quickly Corrects Her", includes a photo of Michelle Obama and Rush Limbaugh. Another article, "Breaking: After Tens of Thousands of Emails Leaked, Second HRC Email Regarding 'Yoga' is Found", includes a photo of Hillary Clinton and Ellen DeGeneres. The sidebar contains three ads: "Potrošniški Krediti" (Sberbank), "Prekini smrčanje" (moj-nasvet.com), and "Snore Terminator" (popolna-pomagba.com). The footer contains a link to "In March 2015 Hillary Clinton held a presser at the United Nations. She said she released all of her work ... Leave a Comment".

IPv4 and NAT64

The screenshot shows the same homepage as the first one, but with a different visual style. The banner and navigation bar are identical. The main content area features the same news articles: "Michelle Obama Says She's Never Heard Anything Like Trump - Rush Limbaugh Quickly Corrects Her" and "Breaking: After Tens of Thousands of Emails Leaked, Second HRC Email Regarding 'Yoga' is Found". The sidebar ads are also the same. The footer contains a link to "In March 2015 Hillary Clinton held a presser at the United Nations. She said she released all of her work ... Leave a Comment".

# Working AAAA record and IPv4-only content

**NAT64**

The screenshot shows a website for 'ZIMSKA DEKORACIJA' (Winter Decoration) with sections for 'DOMOV', 'DOM', 'POROKA', 'OTROCI', 'ZABAVA', and 'EKO ZABAVA'. It features various decorative items like paper crowns, bunting, and pom-poms. A yellow circular badge in the top right corner displays '84%'. Below the main content, there's a note about using piškotki (cookies) for functionality.

**IPv4-only**

The screenshot shows the same website structure but with different decorative items, including a large pink heart-shaped banner. A red circular badge in the top right corner displays '78%'. Below the main content, there's a note about using piškotki (cookies) for functionality.

**IPv6-only**

The screenshot shows the same website structure but with yet another set of decorative items. A red circular badge in the top right corner displays '78%'. Below the main content, there's a note about using piškotki (cookies) for functionality.

# How to test for all of these things?

*(The Looking Glass)*

There are many things to test:

Test on NAT64

Test on IPv6-only

Did all resources (images, stylesheets, scripts) load ok?

Does it look good to the user?

Do we see any pMTUd issues?

One service to test them all: **NAT64Check !!!**

(Caught in a web)

# nat64check

Check: http://www.example.com/

## Image match

NAT64

85%

This screenshot shows the homepage of www.netbk.co.jp. A large green circular overlay at the top right indicates an 85% match for NAT64. The page features various promotional banners for banking services like SBI Sumitomo Net Bank, including offers for 'BIG' accounts, '住宅ローン' (mortgage loans), and 'Visa' cards. Navigation links include '口座情報', 'カード', 'キャッシング', '円預金', '外貨FX', '住宅ローン', 'カードローン', '投資・債券', '保険', and 'お問い合わせ'. A search bar at the bottom has the placeholder 'Q 検索'.

IPv4-only

This screenshot shows the same website as above, but with a large red circular overlay at the top right indicating an IPv4-only match. A prominent banner for '好金利 元本保証の円預金『フレーオフ』' (High Interest Fixed-Rate Yen Deposit 'Fleöff') is displayed, featuring a 0.18% interest rate. Other visible content includes the same banking service links and a search bar at the bottom.

IPv6-only

This screenshot shows the same website as above, but with a large grey circular overlay at the top right indicating an IPv6-only match. It displays the same banking service links and a search bar at the bottom.

# We don't “fix” brokenness

*(Lines in the Sand)*

For NAT64/DNS64 implementations in go6lab, we try to avoid AAAA bogus records and all our DNS64 configs are tuned like we have shown in previous slides.

For NAT64 Check tool, however, we don't exclude anything. We are trying to show how it is in reality and not mask problems. Those people, causing problems needs to find out the situation and fix it.

<https://nat64check.go6lab.si/>

<https://nat64check.ipv6-lab.net/>

# How does this work?

*(Illumination Theory)*

Four servers:

Management server and web interface

Server with only IPv4

Server with only IPv6

Server with NAT64

Go6lab specific: All servers are virtual machines (LIX) on Proxmox 4.2 virtualization cluster

IPv6-lab.net specific: All running on virtual machines (Ubuntu) on a VMware cluster

Using phantomjs as a command-line browser

Keep track of all loaded (or not) resources

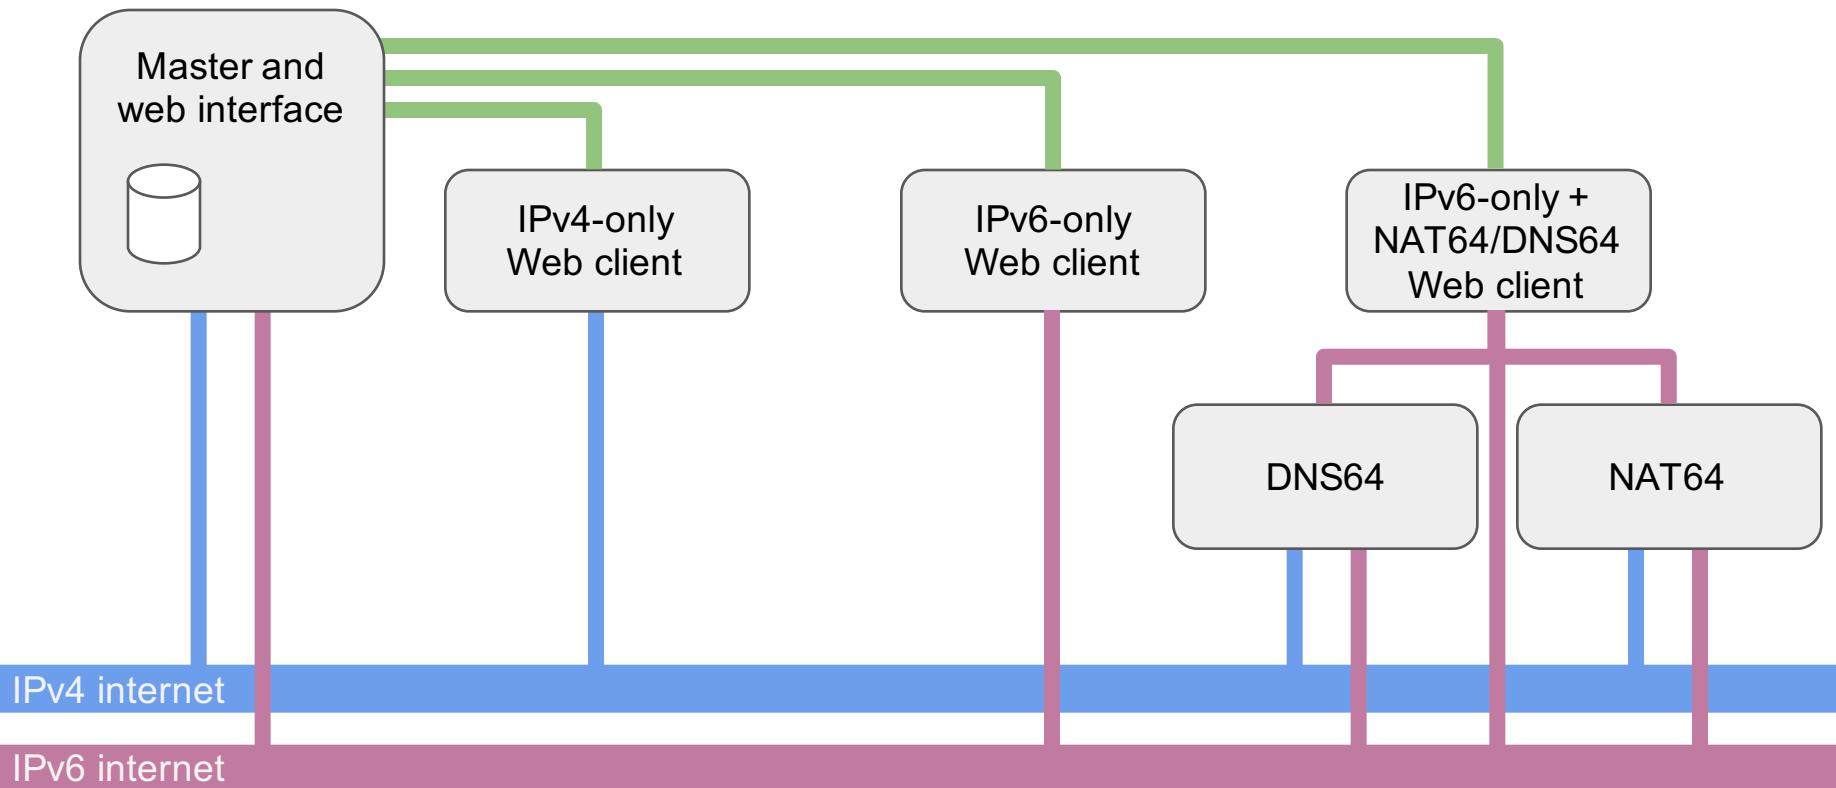

Make a screenshot when the page has loaded

Compare images with each other

Check for resources that could not be loaded

# How does this work?

*(Images and Words)*

# Run the test and calculate the score

*(Take the Time)*

Enter the domain name or URL that you would like to test and submit it to the system.

The process of starting all needed browsers, get the results, grab the screen and calculate/compare all the results takes some time, so please be patient.

# Run the test and calculate the score

*(Take the Time)*

You'll see something like this for some time after you start the measurement...

The system will show you when the test was requested, when test was started and will also show you the result in the same page after some time.

No need to hit the “Back” button, it will happen, just give it some time. We promise. Scout's word of honor. :)

# Wash, rinse and repeat

*(Lifting Shadows of a Dream)*

- Test your website

Are you sure all the images, analytics scripts etc. load over IPv6?

If you don't have IPv6 on your server:

Did you hard-code any IPv4 addresses in your HTML code? In this case NAT64/DNS64 will fail. You might get away with it on 464XLAT, but don't count on it.

Why you don't have IPv6 on your server yet?

If things fail - make sure you are persistent enough to find the issues. There are millions of potential viewers of your content on IPv6-only connection at this precise moment, make sure you don't mess it up and that our tool shows the 100% good result.

- Test again

- Repeat until your website is no longer broken

- If you are fixing a DNS misconfiguration - it might take some time before our tool gets and sees the new and fixed AAAA value. DNS propagation is slow.

# Conclusions, questions, suggestions?

(Act II: Scene Eight: The Spirit Carries On)

If you are content provider: test how people sees your content from different environments

If you are connectivity provider: test how IPv6-only and 464XLAT/NAT64-DNS64 users sees content

If both: all of the above ☺

**You might be surprised. Well, you probably will be surprised.**
